

TEAM ID: PNT2022TMID46690

PROJECT NAME: A Novel Method for Handwritten Digit Recognition System

Project Flow:

The user can upload the image as input

By using Artificial Neural Network based Handwritten Text Recognition (HTR) model

The uploaded image is analyzed by the model which is integrated

Once the model analyses the uploaded image, the prediction is showcased on the UI

To accomplish this, we have to complete all the activities and tasks listed below

. Understanding the data:

Importing the required libraries used in python

Loading the required data

Analyzing the uploaded data

Reshaping the upload data

Applying One Hot Encoding

Model Building:

Creating the model and adding the input, hidden and output layers to it
Compiling the model

Training the mode

Predicting the result

Testing the model by taking image inputs

Saving the model

Application Building:

Create an HTML file for front

endBuild Python Code
